Research Summary

A Fiber Optic Identifier is a specialized tool used in fiber optic communication systems to determine the presence and direction of an optical signal in a fiber optic cable without disrupting the signal transmission. This device works by non-invasively clamping onto the fiber optic cable and detecting the optical signals traveling through it. Fiber optic identifiers typically use techniques such as macrobending, photodetection, or optical spectrum analysis to identify the presence and direction of signals in the fiber. They are commonly used during installation, maintenance, and troubleshooting of fiber optic networks to locate and trace specific fibers within a cable bundle without the need for costly and time-consuming disconnections or interruptions to service. Fiber optic identifiers are essential tools for ensuring the efficient operation and reliability of fiber optic communication systems in various applications, including telecommunications, data centers, and industrial networks.

The major global manufacturers of Fiber Optic Identifier include VIAVI Solutions Inc., EXFO, Fujikura, GAO Tek, Nanjing Jilong Optical Communication Co., Ltd., FITEL,
