### Research Summary

Fiber Optic Rotary Joints (FORJ) are sophisticated electromechanical devices designed to enable the continuous, bidirectional transmission of optical signals across rotating interfaces. These compact and precision-engineered components are essential in applications where there is a need for uninterrupted optical connectivity between stationary and rotating parts of a system, such as in radar systems, military equipment, medical imaging devices, and industrial machinery. FORJs utilize specialized optical and mechanical designs to maintain low signal loss and high data transmission rates while allowing for the rotation of optical fibers without tangling or compromising the optical signal quality. They play a crucial role in ensuring the reliability and efficiency of optical communication and data transfer in rotating systems.
