Research Summary

Fiber Reinforced Composite is a material consisting of a matrix, often a polymer, reinforced with high-strength fibers, typically made of materials like carbon, glass, aramid, or natural fibers such as bamboo or hemp. These fibers are embedded within the matrix to create a composite material that combines the properties of both components. Fiber reinforced composites are known for their exceptional strength-to-weight ratio, making them lightweight yet incredibly strong and stiff. They offer excellent resistance to corrosion, fatigue, and impact, making them suitable for a wide range of applications, including aerospace, automotive, marine, construction, and sports equipment manufacturing. The specific choice of matrix and fiber materials can be tailored to meet specific performance requirements, resulting in composites that exhibit exceptional mechanical, thermal, and electrical properties, making them a versatile and highly sought-after material in various industries.

The major global manufacturers of Fiber Reinforced Composite include BASF, DuPont, LAN XESS, DSM, SABIC, Poly One, SOLVAY, RTP, Clanes, Innovation by Chemistry,
