Research Summary

Fiber-Reinforced Metal Laminate, often abbreviated as FML, is a composite material used in aerospace and structural engineering applications. It combines layers of thin metal sheets (typically aluminum) with layers of high-strength, unidirectional fibers (usually glass or carbon) embedded in a polymer matrix. The metal layers provide structural strength and durability, while the fiber-reinforced layers enhance the material's stiffness and resistance to fatigue and impact. FMLs are known for their high strength-to-weight ratio, corrosion resistance, and ability to withstand cyclic loading, making them suitable for aircraft components, spacecraft structures, and other lightweight, high-performance applications where strength and weight efficiency are critical.

The major global manufacturers of Fiber-Reinforced Metal Laminate include Premium Aerotec, Fokker Technologies, etc. The global players competition landscape in this report is divided into three tiers.
