Research Summary

Fiberglass is a lightweight and extremely strong synthetic material made by combining fine strands of glass fibers with resin. The glass fibers are often woven together to create a mat, which is then saturated with a thermosetting resin, such as epoxy or polyester. Once the resin cures or hardens, it forms a rigid, durable material that is resistant to heat, chemicals, and water. Fiberglass is commonly used in a variety of applications, including boats, aircraft, automobiles, construction materials, and sporting goods. It is also used as insulation in buildings and homes.

The major global manufacturers of Fiberglass include Owens Corning, Jushi Group, Taishan Fiberglass (Sinoma), CPIC, Saint-Gobain Vetrotex, PPG Industries, Nippon Electric Glass, Johns Mansville, Nittobo, Advanced Glassfiber Yarns, Binani-3B, Sichuan Weibo, Jiangsu Jiuding, Lanxess, Changzhou Tianma, Ahlstrom, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market

presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
