Research Summary

Fire alarm and automatic fire-fighting systems are essential components of fire safety infrastructure designed to detect, alert, and mitigate fire emergencies in buildings and industrial settings. The fire alarm system comprises detectors (smoke, heat, flame), manual call points, control panels, and notification devices interconnected to detect signs of fire and alert occupants and emergency responders through alarms and evacuation signals. Simultaneously, automatic fire-fighting systems such as sprinklers, gaseous suppression systems, foam systems, or water mist systems activate automatically upon fire detection to suppress or extinguish fires, limiting their spread and minimizing damage. Integrating these systems ensures swift response, early detection, and effective suppression of fires, enhancing overall fire safety and protecting lives and property.
