Research Summary

A fire automation system, also known as a fire alarm and detection system, is a comprehensive network of interconnected devices and components designed to detect, notify, and respond to fire emergencies automatically. These systems typically include smoke detectors, heat detectors, flame detectors, manual call points (fire alarm buttons), control panels, annunciators, and notification devices such as sirens, strobe lights, and voice evacuation systems. The primary purpose of a fire automation system is to detect the presence of smoke, heat, or flames in the early stages of a fire, activate alarms to alert occupants and emergency responders, and initiate predefined actions such as activating fire suppression systems, closing fire doors, and initiating evacuation procedures. Modern fire automation systems may also integrate with building management systems (BMS), security systems, and communication networks for centralized monitoring, control, and coordination of fire safety measures in buildings, industrial facilities, and public spaces, thereby enhancing overall fire safety and response capabilities.

The major global suppliers of Fire Automation System include Hochiki Corporation, Firefly AB, UTC, Gulf Security Technology Co., Ltd, Yachuan, Fike, Sterling Safety Systems, EMS Security, Micropack Engineering Ltd, Chenganshengbang(Beijing) Networktechnology Co.,Ltd., Suzhou Sidi Information Technology Co.,Ltd., Beijing Fusaier Fire Safety Equipment Co.,Ltd., China Entropy, TONGYOU, HuiAn, etc. The global players competition landscape in this report is divided into three tiers.
