### Research Summary

Fire barrier sealant is a specialized material used to create a protective seal in building joints, gaps, or penetrations to prevent the spread of fire, smoke, and hot gases. Typically made of fire-resistant materials, these sealants are applied to openings in walls, floors, and ceilings, serving as a crucial component of passive fire protection systems. Fire barrier sealants expand and form an intumescent char when exposed to high temperatures, effectively sealing off gaps and restricting the passage of flames and smoke. This intumescent reaction helps to maintain the structural integrity of fire-rated compartments and slows down the progression of fire, providing valuable time for evacuation and emergency response. Fire barrier sealants are commonly used in various construction applications to meet building code requirements and enhance overall fire safety measures.

The major global manufacturers of Fire Barrier Sealant include 3M Company, Hilti, Rockwool, H. B. Fuller, Bostik (Arkema), Tremco, Everbuild (Sika AG), Specified Technologies, Fosroc (JMH Group), Pecora, Metacaulk (Rectorseal), Trafalgar Fire,
