Research Summary

A fire blanket is a safety device designed to extinguish small fires by cutting off the fire's oxygen supply. Typically made of fire-resistant materials like fiberglass or wool, a fire blanket is a large piece of fabric that can be quickly and easily thrown over a fire to smother it. Fire blankets are commonly stored in kitchens, laboratories, and other areas where small fires may occur. In the event of a fire, the blanket is pulled from its storage container, and it is placed over the flames, effectively suppressing the fire by eliminating the oxygen needed for combustion. Fire blankets are a simple yet effective tool for addressing small fires and are often used in conjunction with other fire safety equipment in homes, workplaces, and industrial settings.
