Research Summary

Fire blocking material refers to substances or products specifically designed and employed in construction to impede the vertical and horizontal spread of fire within building structures. These materials are strategically placed in concealed spaces, such as wall cavities and floor or ceiling voids, to block the passage of flames, smoke, and hot gases. Common fire blocking materials include fire-resistant foams, mineral wool insulation, and intumescent compounds. The primary purpose of fire blocking is to compartmentalize different areas of a building, preventing the rapid spread of fire and providing additional time for occupants to evacuate safely. Building codes often require the use of fire blocking materials to enhance the overall fire safety of structures, particularly in multi-story buildings, where the containment of fire is crucial for limiting damage and protecting lives.

The major global manufacturers of Fire Blocking Material include Hilti, 3M, Incatech, Sika, Rockwool, Arkema, Yantai Jinruen, Tianfu, Huaxing, Antai, Anshengda, Hebei Junhui, Jiangsu Hailong, Baiyun Chemical, Shanghai Weineng, etc. The global players
