Research Summary

Fire extinguishers are portable firefighting devices designed for the immediate and localized suppression of small fires. Comprising a pressurized container filled with a firefighting agent, such as water, foam, dry chemical, or carbon dioxide, fire extinguishers are equipped with a nozzle or hose for directing the extinguishing agent onto the fire. The choice of extinguishing agent depends on the type of fire, with different classes designated for fires involving ordinary combustibles, flammable liquids, electrical equipment, and metals. Fire extinguishers play a crucial role in the early stages of a fire emergency, enabling individuals to intervene quickly and suppress small fires before they escalate. They are commonly found in various settings, including homes, offices, industrial facilities, and vehicles, as part of an overall fire safety strategy. Regular inspection, maintenance, and proper training on the use of fire extinguishers are essential to ensure their effectiveness during emergencies.
