Research Summary

Fire Rated Composite Sandwich Panels are building materials engineered for their fire resistance properties and structural strength. These panels typically consist of a core material, often made of materials like foam or mineral wool, sandwiched between layers of fire-resistant composite materials. The composite layers contribute to the panel's overall durability and provide additional fire protection. These panels are widely used in construction for applications such as walls, ceilings, and floors in buildings where fire safety is a critical consideration. The combination of the core material and fire-resistant layers creates a robust and insulating structure that helps prevent the spread of fire and ensures the safety of occupants. These fire-rated composite sandwich panels find use in various industries, including commercial and residential construction, offering a balance between structural performance and fire safety requirements.
