Research Summary

Fire-resistant glass is a specially engineered glass designed to resist the transmission of flames, smoke, and radiant heat during a fire. Typically used in building construction, fire-resistant glass helps compartmentalize spaces and maintain the integrity of fire-rated barriers, such as fire doors and partitions. The glass is often constructed with multiple layers and may incorporate interlayers that react to heat by becoming opaque or forming a barrier, preventing the passage of flames and smoke. Fire-resistant glass is essential for creating safe evacuation routes and maintaining visibility for emergency responders during a fire incident. It is commonly utilized in areas where building codes require specific fire ratings, such as stairwells, corridors, and openings in fire-rated walls. The effectiveness of fire-resistant glass is determined by its ability to withstand fire for a specified duration, and it plays a critical role in enhancing overall fire safety in buildings.

The major global manufacturers of Fire Resistant Glass include NSG, AGC, Saint-Gobain, SCHOTT, Pilkington, Dunamenti, Metalco Glazing, DB Glass, Essex Safety
