Research Summary

Fire retardant plywood is a type of plywood that has been treated with fire-resistant chemicals or coatings to reduce its flammability and enhance its fire resistance. This treatment is especially important in construction and building applications where the spread of fire poses a significant risk. Fire retardant plywood is commonly used in areas where building codes require specific fire ratings, such as walls, roofs, and floors. The treatment typically involves impregnating the plywood with fire-retardant chemicals that react when exposed to heat, forming a protective char layer that inhibits the progression of flames. This charring process can significantly delay the ignition and combustion of the plywood, providing additional time for evacuation and emergency response in the event of a fire. Fire retardant plywood is an essential component of passive fire protection measures in buildings, contributing to overall fire safety.

The major global manufacturers of Fire Retardant Plywood include Flameproof Companies, Hoover Treated Wood Products, Lonza, Viance, Bayou City Lumber, Mets? Wood, etc. The global players competition landscape in this report is divided into three
