### Research Summary

Fire sprinkler heads are integral components of automatic fire sprinkler systems, designed to detect and control the spread of fire in buildings. These heads are mounted on pipes connected to a water supply and are strategically placed throughout a structure. Each sprinkler head is equipped with a heat-sensitive element, commonly a glass bulb containing a liquid or a fusible metal link, which activates when exposed to high temperatures indicative of a fire. Once activated, the sprinkler head releases pressurized water or other fire-extinguishing agents directly onto the affected area, suppressing or extinguishing the flames. The widespread use of fire sprinkler systems, including the configuration and placement of sprinkler heads, is regulated by building codes and standards to ensure effective fire protection. Fire sprinkler heads are a critical part of active fire suppression measures, contributing to life safety and property protection in the event of a fire.

The major global manufacturers of Fire Sprinkler Heads include Tyco International (Johnson Controls), TianGuang Fire-fighting, China NFPT, Viking Group, GuangZhou
