Research Summary

A fire window is a specialized window designed to resist the spread of fire and smoke within a building. Typically installed in fire-rated walls, fire windows are constructed with materials and features that enhance their fire-resistant properties. These windows are equipped with fire-rated glass, which is designed to withstand exposure to high temperatures and prevent the passage of flames and smoke for a specified duration. Fire windows contribute to the overall fire safety of a structure by helping to compartmentalize areas and providing a means of safe egress during a fire emergency. Compliance with fire safety codes and standards, regular maintenance, and proper installation are crucial to ensuring the effectiveness of fire windows in protecting occupants and limiting the impact of a fire on a building.
