### Research Summary

Firefighting foam is a specialized firefighting agent designed to suppress and control flammable liquid fires by forming a blanket or barrier on the liquid's surface. Composed of water, foam concentrate, and air, firefighting foam works by separating the fuel from the oxygen in the air, preventing the ignition source from reaching the flammable liquid. This type of firefighting agent is particularly effective for dealing with fires involving fuels such as gasoline, oil, or industrial chemicals. There are different types of firefighting foam, including AFFF (Aqueous Film-Forming Foam) and AR-AFFF (Alcohol-Resistant Aqueous Film-Forming Foam), each tailored to address specific fire risks and chemical properties. Firefighters deploy foam using specialized equipment, such as foam generators or nozzles, and its application is a crucial aspect of managing hazardous material incidents and large-scale industrial fires.

The major global manufacturers of Firefighting Foam include Tyco Fire Protection Products, Amerex Corporation, National Foam, Perimeter Solutions, DIC, Suolong, Dafo Fomtec, Fire Service Plus, Dr. Richard Sthamer, Angus Fire, Buckeye Fire Equipment,

Foamtech Antifire, Profoam, Orchidee, Jiangya, Langchao, Liuli, WFS, Nenglin, K. V. Fire, etc. The global players competition landscape in this report is divided into three tiers.
