Research Summary

A fire hose is a flexible tube designed for conveying water, or other fire retardant substances, to extinguish fires. Comprising an inner layer for water flow, a reinforcement layer for strength, and an outer layer for protection against abrasion and environmental factors, fire hoses come in various sizes and materials to suit different firefighting applications. Typically constructed from materials like rubber, polyester, or a combination of synthetic fibers, fire hoses are crucial components of firefighting equipment. They are attached to fire hydrants, fire trucks, or other water sources and are deployed by firefighters to deliver pressurized water or fire-retardant agents directly to the seat of a fire.
