### Research Summary

Fireproofing coatings for wood are specialized substances applied to wooden surfaces to enhance their resistance to fire and prevent or delay the ignition and spread of flames. These coatings typically consist of fire-retardant chemicals that create a protective barrier when applied to the surface of the wood. The coatings may intumesce, meaning they swell when exposed to heat, forming a charred layer that insulates the wood from the flames and slows down combustion. Fireproofing coatings are crucial for improving the fire safety of structures, especially in environments where wood is a common building material. These coatings can be used in various settings, including residential, commercial, and industrial buildings, providing an additional layer of protection against the devastating effects of fire and contributing to overall fire prevention and safety measures.

The major global manufacturers of Fireproofing Coatings for Wood include Sherwin, BASF, Rudolf Hensel, Nordtreat AS, Fire Retardant Coatings of Texas, Teknos Group, ICA Group, Envirograf, Flame Stop, Lanling Chemical, Shengguang Group, BBMG
