Research Summary

Firestop sealants are specialized materials used to create a barrier against the spread of fire, smoke, and toxic gases through joints, gaps, or penetrations in building structures. These sealants are applied in areas where pipes, cables, ducts, or other penetrations pass through walls, floors, or ceilings. Composed of fire-resistant materials, firestop sealants expand and harden when exposed to heat, creating a fire-resistant seal that helps compartmentalize a building and prevent the rapid spread of flames. Firestop sealants play a crucial role in fire safety and are a key component in maintaining the integrity of fire-rated assemblies. They are commonly used in commercial and industrial buildings, as well as residential structures, to meet fire code requirements and enhance the overall fire protection of a building by closing gaps that could serve as pathways for fire and smoke.

The major global manufacturers of Firestop Sealants include 3M Company, Hilti, Rockwool, H. B. Fuller, Bostik (Arkema), Tremco, Everbuild (Sika AG), Specified Technologies, Fosroc (JMH Group), Pecora, Promat, Trafalgar Fire, Metacaulk
