Research Summary

Fireworks are pyrotechnic devices designed to produce vibrant and dazzling displays of light, color, and sound. Typically used in celebrations, festivals, and special events, fireworks consist of explosive materials enclosed in casings, combined with chemical compounds that generate various visual and auditory effects. When ignited, fireworks launch into the sky, where they explode, creating intricate patterns of colorful bursts, sparkles, and shapes. The brilliant visual effects are achieved through the use of different metal salts that emit distinct colors when heated. Fireworks can vary in size, shape, and complexity, ranging from simple firecrackers to elaborate aerial displays.
