Research Summary

Fishing nets and aquaculture cages are both essential components in the realm of fisheries and aquaculture. Fishing nets, constructed from various materials such as nylon or monofilament, are designed for capturing fish in commercial and recreational fishing operations. They come in diverse styles like seine nets, gill nets, and trawl nets, catering to different fishing techniques and target species. On the other hand, aquaculture cages are structures typically made of nets or mesh suspended in open water bodies, serving as enclosures for cultivating and raising fish or shellfish in controlled environments. Aquaculture cages allow for the efficient management and harvesting of aquatic organisms, supporting sustainable aquaculture practices. Both fishing nets and aquaculture cages are integral tools in the seafood industry, contributing to the global supply of fish and seafood products while requiring careful management to ensure environmental sustainability and responsible fishing practices.
