### Research Summary

A fixed perimeter is a device used in ophthalmic diagnosis, primarily to evaluate and measure the extent and function of the eye's visual field. It works by providing a fixed visual field testing area, asking patients to fixate on a central point, and displaying light spots or images at different locations. Patients are asked to report the location of the light spots they can see. Fixed perimetry is commonly used to detect and diagnose various eye conditions, such as glaucoma, optic neuropathy, and retinopathy, as these conditions may affect certain areas of the visual field. Unlike portable perimeters, fixed perimeters are usually used in hospitals or clinics to provide higher-precision measurement results, help ophthalmologists conduct detailed visual assessments, and provide important data support for subsequent treatment or surgery.

The major global manufacturers of Fixed Perimeter include Carl Zeiss Meditec Group, Haag-Streit Group, Revenio Group, OCULUS Optikger?te GmbH, Topcon Corporation, Optopol Technology, Frey, NIDEK, M&S Technologies (Hilco Vision), Tomey Corporation, Kowa, Virtual Field, Inc., Medmont, Takagi, Micro Medical Device, Olleyes,

Heru, Inc., Elisar Vision Technology, etc. The global players competition landscape in this report is divided into three tiers.
