Research Summary

Fixed power capacitors are electrical components designed to store and release electrical energy in alternating current (AC) circuits. These capacitors are fixed in value, meaning their capacitance remains constant and does not change during operation. Fixed power capacitors play a crucial role in power factor correction, where they are used to counteract the effects of inductive loads in electrical systems. By adding capacitive reactance to the circuit, fixed power capacitors help improve power factor, reduce reactive power losses, and enhance the overall efficiency of power distribution. They are commonly used in industrial settings, commercial buildings, and utility systems to optimize the use of electrical power, reduce energy costs, and maintain a stable and reliable electrical supply. The fixed nature of these capacitors distinguishes them from variable capacitors, which can be adjusted to different capacitance values.

The major global manufacturers of Fixed Power Capacitors include ABB, Schneider Electric, Eaton, Nissin Electric, China XD, Siyuan, Guilin Power Capacitor, Electronicon, GE Grid Solutions, Herong Electric, New Northeast Electric, TDK, Vishay, L&T, LIFASA,
