### Research Summary

Flame Retardant Polycarbonate is a type of polycarbonate plastic that has been chemically treated or modified to resist ignition and slow the spread of fire. This material combines the inherent toughness and impact resistance of standard polycarbonate with added flame-retardant properties, making it suitable for applications where fire safety is critical, such as in electrical components, automotive parts, building materials, and safety equipment. The flame retardant additives used in the polymer reduce the material's flammability and help it meet various fire safety standards, such as UL 94, which rates the material's ability to self-extinguish after being exposed to flame. Flame Retardant Polycarbonate maintains the clear, durable, and high-performance characteristics of regular polycarbonate, while offering enhanced protection against fire hazards, making it a popular choice in environments where both safety and reliability are paramount.

The major global manufacturers of Flame Retardant Polycarbonate include Sabic, Mitsubishi Engineering-Plastics Corporation, Covestro, Teijin, LG Chem, Idemitsu
