Research Summary

Flexible AC Transmission Systems (FACTS) represent a category of advanced power electronics and control systems designed to enhance the efficiency, flexibility, and reliability of high-voltage AC transmission networks. FACTS devices are employed to dynamically control and optimize the flow of electric power on the grid. These systems include devices such as Static Var Compensators (SVC), Thyristor-Controlled Series Capacitors (TCSC), Static Synchronous Compensators (STATCOM), and Unified Power Flow Controllers (UPFC). By manipulating voltage, reactance, and impedance, FACTS technologies can improve the power transfer capability, stability, and overall performance of the electrical grid. They play a crucial role in mitigating issues like voltage fluctuations, line congestion, and power losses, contributing to the efficient and stable operation of power systems, particularly in the context of the evolving energy landscape and the integration of renewable energy sources.

The major global suppliers of Flexible AC Transmission Systems (FACTS) include ABB,
