Research Summary

Flexible dies are specialized tools used in the die-cutting process for shaping, scoring, or perforating materials, typically in the manufacturing of labels, packaging, and other printed products. Unlike traditional rigid dies, flexible dies are crafted from a thin, flexible sheet of steel, allowing them to adapt to the contours of the material being cut. This flexibility makes them well-suited for intricate and detailed designs, providing a high level of precision in the die-cutting process. Flexible dies are commonly used in rotary die-cutting machines, where the material passes through the machine and is subjected to the cutting action of the rotating flexible die. This method is particularly efficient for high-volume production and offers advantages in terms of cost-effectiveness, speed, and versatility in handling various materials.

The major global manufacturers of Flexible Dies include RotoMetrics, Atlas Die (Bernal), Wilson Manufacturing, Kocher+Beck, Spilker, Wink, Drohmann, Sanjo Machine Works, Tsukatani Hamono Mfg, ESON CZ, Suron, Hadesheng, Grandcorp Group, Lartec, etc. The global players competition landscape in this report is divided into three tiers.
