Research Summary

Flexible elastomeric foam is a type of insulation material known for its flexibility, durability, and excellent thermal and acoustic insulating properties. Typically made from synthetic rubber compounds, such as NBR (nitrile butadiene rubber) or EPDM (ethylene propylene diene monomer), this foam exhibits a closed-cell structure, which prevents the passage of air and moisture. The flexibility of the material allows it to conform to irregular shapes and surfaces, making it particularly well-suited for insulating pipes, HVAC (heating, ventilation, and air conditioning) systems, and other curved or contoured applications. Its elastomeric nature provides resistance to vibrations and mechanical stresses, contributing to its effectiveness in reducing heat transfer and sound transmission. Additionally, flexible elastomeric foam is often used in applications requiring a lightweight and durable insulation solution, offering energy efficiency and long-term performance in various industrial and commercial settings.

The major global manufacturers of Flexible Elastomeric Foam include Armacell, K-FLEX, Aeroflex USA, NMC, Zotefoams, Kaimann, Durkee, Huamei, Thermaflex, Union
