Research Summary

Flexible Screen MIM (Metal Injection Molding) Hinges are specialized components used in devices with foldable or flexible screens, such as smartphones, tablets, and wearables. These hinges are produced using MIM technology, a process that combines fine metal powders with a binder to create complex, high-precision parts. The flexibility of the screen hinges allows the device to be bent or folded without compromising its functionality or durability. MIM hinges offer significant advantages, such as high strength, lightweight design, and intricate shapes that traditional manufacturing methods may struggle to achieve. These hinges are crucial for enabling smooth folding mechanisms, ensuring that flexible screens remain intact and perform reliably over extended use.
