### Research Summary

Flexographic printing (flexo) is a high-speed, versatile printing method that uses flexible relief plates made of rubber or photopolymer to transfer ink onto various substrates, including paper, plastic, film, and metallic surfaces. It is widely used for packaging, labels, and corrugated materials due to its ability to produce sharp, consistent images on a variety of materials. Flexo printing uses fast-drying inks and can accommodate long production runs with minimal downtime, making it ideal for cost-effective, high-volume printing applications.
