Research Summary

Flip chips refer to a semiconductor packaging technology where the active side of a bare semiconductor chip is flipped and directly attached to a substrate or another chip, typically using solder bumps or conductive adhesives. Unlike traditional packaging methods where the chip is mounted with the active side facing up, flip chips offer advantages such as reduced interconnection lengths, improved electrical performance, and enhanced heat dissipation. This technology allows for higher-density packaging, enabling more compact and efficient electronic devices. Flip chip packaging is commonly used in microprocessors, integrated circuits, and other semiconductor applications where the demand for miniaturization and increased performance is crucial. The flip chip configuration also facilitates better signal integrity, making it suitable for high-frequency applications and contributing to the advancement of semiconductor packaging techniques.

The major global manufacturers of Flip Chips include Amkor, Taiwan Semiconductor Manufacturing, ASE Group, Intel Corporation, JCET Group Co.,Ltd, Samsung Group, Powertech Technology, SPIL, Tongfu Microelectronics Co., Ltd, HC Semitek, SANAN
