Research Summary

A floating solar system, also known as a floating solar farm or floating photovoltaic (FPV) system, is a renewable energy technology that involves installing solar panels on bodies of water, such as lakes, reservoirs, or ponds. Unlike traditional ground-mounted or rooftop solar installations, floating solar systems utilize buoyant platforms that support the solar panels, allowing them to float on the water's surface. These systems offer several advantages, including efficient use of available space, reduced evaporation from the water body, and the potential to generate electricity while also providing cooling for the solar panels. Floating solar systems are particularly beneficial in areas with limited land availability or where water bodies are used for multiple purposes. They contribute to the expansion of renewable energy capacity and demonstrate a sustainable approach to power generation.

The major global suppliers of Floating Solar System include Sungrow, Ciel and Terre, BayWa r.e., LS Electric Co., Ltd., Trina Solar, Ocean Sun, Adtech Systems, Waaree Energies Ltd, Swimsol, Isigenere (Isifloating), Yellow Tropus, etc. The global players
