### Research Summary

Flocculants and coagulants are chemical substances used in water and wastewater treatment processes to facilitate the removal of suspended particles and impurities. Coagulants are typically metal salts or organic polymers that destabilize the charged particles in water, promoting the formation of larger, aggregated masses called flocs. These flocs are easier to settle or filter out of the water. Flocculants, on the other hand, are agents that encourage the binding together of these smaller flocs into larger, heavier particles, aiding in their separation from the water. The combined use of coagulants and flocculants is a common practice in water treatment plants to enhance the efficiency of processes like sedimentation, flotation, or filtration, ensuring the production of cleaner and clearer water for various purposes, including drinking water supply and industrial processes.

The major global manufacturers of Flocculant and Coagulant include SNF Group, Kemira, Solenis, Ecolab, Chemtrade Logistics, Feralco Group, Grupo Bauminas, SUEZ Group, Jianheng Industry, Changlong Tech, USALCO, Shandong Sanfeng Group,
