### Research Summary

Fluid rotary unions, also known as rotary joints or swivels, are mechanical devices designed to transfer fluids, such as liquids or gases, from a stationary source to a rotating or oscillating part of a system. These devices are crucial in applications where continuous fluid transfer is required while accommodating rotational movement. Fluid rotary unions allow for the seamless transmission of various media, including hydraulic fluids, coolant, air, or even specialized gases, between stationary and rotating components. Commonly used in industrial machinery, automation systems, and rotary equipment, these unions contribute to the efficiency and reliability of systems that involve rotating or moving parts, preventing the need for hoses or cables that might otherwise become twisted or damaged during movement. Fluid rotary unions are engineered with precision to provide a leak-free and durable solution for fluid transfer in dynamic systems.

The major global manufacturers of Fluid Rotary Unions include Moog, Columbus McKinnon, Kadant, RIX, SRS, Dynamic Sealing Technologies, MOFLON, GAT, Rotary

Systems, BGB Innovation, Deublin, Talco, etc. The global players competition landscape in this report is divided into three tiers.
