Research Summary

Fluorene is a polycyclic aromatic hydrocarbon (PAH) composed of two benzene rings fused together, resulting in a structure with a linear arrangement of carbon atoms. It is a white crystalline solid with a distinct sweet odor. Fluorene is a naturally occurring compound found in coal tar, but it is more commonly produced synthetically for various industrial applications. It has been used in the manufacturing of dyes, pharmaceuticals, and as a building block in the synthesis of other organic compounds. Fluorene's unique structure and properties also make it a subject of interest in materials science and organic chemistry research. While it has versatile applications, fluorene is recognized as a potential environmental pollutant, and efforts are made to manage its release and exposure due to its presence in some industrial processes and products.

The major global manufacturers of Fluorene include JFE Chemical Corporation, Huanghua Xinnuo Lixing, Baoshun, Sinochem Group, DEZA a. s., Shandong Gude Chemical, Xiaoyi Jinjing Chemical, Zoucheng Qifa Chemical, Ansteel, An'shan Luhai Chemicals, etc. The global players competition landscape in this report is divided into three tiers.
