Research Summary

Fluorine-based grease is a lubricating grease that contains a compound of fluorine, typically in the form of polytetrafluoroethylene (PTFE) or other fluoropolymer additives. Fluorine-based greases are known for their excellent lubricating properties, particularly in extreme conditions such as high temperatures, heavy loads, and harsh chemical environments. PTFE, often known by the brand name Teflon, provides low friction, high wear resistance, and stability over a wide temperature range. Fluorine-based greases are commonly used in industrial applications, automotive components, and in situations where conventional lubricants may fail to perform adequately. Their ability to withstand extreme conditions makes them valuable for applications ranging from aerospace to food processing equipment, contributing to enhanced equipment reliability and longevity.

The major global manufacturers of Fluorine-Based Grease include DuPont, Chemours, Solvay, Kluber Lubrication, Huskey, Daikin Industries, Harves, Condat, IKV Group, Setral Chemie, Sumico Lubricant, Leybold, ICAN, etc. The global players competition
