Research Summary

Fluorine gas (F2) is a diatomic, pale-yellow, highly reactive halogen that belongs to Group 17 of the periodic table. As the most electronegative element, fluorine readily forms compounds with nearly all other elements, and its chemical reactivity is so pronounced that it rarely exists in its elemental form in nature. Fluorine gas is known for its corrosive nature and toxic properties, and it reacts violently with many substances. Due to these characteristics, handling fluorine gas requires specialized equipment and precautions. Despite its challenges, fluorine gas finds use in certain industrial applications, such as the synthesis of fluorinated compounds and as a fluorinating agent in organic chemistry processes. The demand for fluorine gas arises from its role in the production of various fluorinated materials, chemicals, and pharmaceuticals, contributing to diverse industrial processes while requiring careful handling and safety measures.

The major global manufacturers of Fluorine Gas (F2) include Linde, Solvay, Air Products, Kanto Denka, Hyosung Chemical, Zhuoxi Gas, Central Glass, etc. The global
