Research Summary

Fluorocarbon lubricants, often referred to as PTFE (polytetrafluoroethylene) or Teflon lubricants, are a type of synthetic lubricant renowned for their exceptional chemical resistance, low friction coefficient, and wide temperature stability. These lubricants are composed of fluorinated hydrocarbons, which provide unique properties like non-stickiness and resistance to moisture, chemicals, and extreme temperatures. They are commonly used in various applications where conventional lubricants fail to perform, such as in aerospace, automotive, and industrial machinery. Fluorocarbon lubricants reduce friction and wear between moving parts, leading to improved efficiency, longevity, and reliability of mechanical systems. Additionally, they are often used in situations where cleanliness is crucial, such as in food processing and medical equipment, due to their inert nature and non-toxic properties.

The major global manufacturers of Fluorocarbon Lubricants include Nye Lubricants, The Chemours Company, ODSi Lubricant Technology Co., Ltd., Solvay, Halocarbon, Shinochem, Chemours, Daikin Industries, IKV, DuPont, Sumico Lubricant, Metalub, 3M,
