Research Summary

A fluoropolymer coating refers to a thin layer of fluoropolymer applied to a substrate surface, providing it with a range of desirable properties. Fluoropolymer coatings, such as those made from polytetrafluoroethylene (PTFE) or similar compounds, offer exceptional non-stick characteristics, chemical resistance, and high-temperature stability. These coatings are commonly used in the manufacturing of non-stick cookware, bakeware, and industrial equipment where reduced friction and resistance to corrosive substances are crucial. Fluoropolymer coatings are valued for their ability to create a durable and protective barrier on surfaces, preventing adhesion of substances and facilitating easy cleaning. The versatility of fluoropolymer coatings extends to applications in the automotive, aerospace, and chemical processing industries, contributing to the longevity and performance of components exposed to challenging environmental conditions.

The major global manufacturers of Fluoropolymer Coating include Chemours, Dalian Zebon, PPG, AkzoNobel, Axalta, Sherwin-Williams, Beckers, KCC, Daikin, Wuxi
