### Research Summary

Fly ash ceramsite is a lightweight aggregate material produced by sintering or firing fly ash, a byproduct of coal combustion in power plants, at high temperatures. The term 'ceramsite' refers to a ceramic-like material with spherical or rounded granules. In the case of fly ash ceramsite, the raw fly ash is processed and fired, leading to the expansion and formation of porous spherical particles. The resulting ceramsite has low density, making it suitable for applications in lightweight concrete, insulating materials, and construction aggregates. Fly ash ceramsite offers benefits such as improved thermal insulation, reduced overall weight in construction materials, and the utilization of a waste product in an environmentally friendly manner. This material finds application in various construction and infrastructure projects where lightweight and thermally insulating properties are desirable.

The major global manufacturers of Fly Ash Ceramsite include Aggregate Industries, LSA sp. z o.o., Salt River Materials Group, Brickwell, Jinzhong Qihong fly ash Technology Development, Chongqing Haopan Energy Saving Technology, Ju Rong
