### Research Summary

Fly ash is a fine, powdery residue that results from the combustion of pulverized coal in power plants. It is composed of mineral particles, predominantly consisting of silica, alumina, iron, and calcium oxides. As coal combusts, impurities in the coal, such as minerals and trace elements, combine with the combustion process and solidify into tiny, spherical particles. These particles are then collected from the flue gases using electrostatic precipitators or other air pollution control devices. Fly ash is a byproduct of coal-fired power generation and is considered a supplementary cementitious material. It is often used in the construction industry as a pozzolan in the production of concrete. Adding fly ash to concrete enhances its workability, reduces heat generation during curing, and improves long-term strength and durability. Moreover, the use of fly ash in concrete contributes to sustainable construction practices by utilizing a waste product in an environmentally responsible manner.

The major global manufacturers of Flyash include LafargeHolcim, CEMEX, Anhui Conch Cement, China National Building Material, CECEP, Boral Limited, Ningxia Jinxiu Group, Charah Solutions, Titan America LLC, Salt River Materials Group, Hokkaido

Electric Power, Kanden Power-Tech, Ashtech, Ashcor Technologies, etc. The global players competition landscape in this report is divided into three tiers.
