Research Summary

Foam glass is a type of lightweight, cellular material made from recycled glass and a foaming agent. It is produced by heating a mixture of crushed glass, carbon or limestone, and a blowing agent, which creates a foaming reaction that expands the glass into a rigid foam structure. The resulting foam glass material has a cellular structure with interconnected glass bubbles, giving it unique properties. Foam glass is known for its excellent insulation capabilities, as the glass bubbles trap air, reducing heat transfer and providing thermal efficiency. It is also resistant to moisture, fire, and chemicals, making it suitable for various applications. Foam glass is commonly used as insulation for roofs, walls, and floors, as well as for piping systems in industries such as construction, energy, and chemical processing. Its lightweight nature, durability, and insulation properties make it an eco-friendly and effective choice for thermal and structural insulation needs.

The major global manufacturers of Foam Glass include Corning, GLAPOR, Earthstone, REFAGLASS, Zhejiang DEHO, Huichang New Material, YaHong, ZhenShen, Zhong Tai Tian Cheng, ShouBang, YongLi, Hebei Thermal Insulation, Hebei Baimei New
