Research Summary

A foam roller is a cylindrical fitness and self-myofascial release tool used for self-massage and muscle relaxation. Typically made of dense foam, these rollers come in various sizes and densities to cater to different preferences and needs. The user places the foam roller on the floor and then uses their own body weight to apply pressure to specific muscle groups by rolling over the targeted areas. This process helps release tension, alleviate muscle tightness, and improve flexibility. Foam rolling is widely incorporated into fitness routines, physical therapy, and rehabilitation programs, promoting better circulation, reducing muscle soreness, and enhancing overall mobility. The practice is based on the concept of self-myofascial release, aiming to release knots or trigger points within the fascia, the connective tissue that surrounds muscles. Foam rollers have become popular among athletes and fitness enthusiasts as a cost-effective and accessible means of self-care for muscular health and recovery.
