Research Summary

Food encapsulation of new active ingredients involves the process of enclosing or enveloping bioactive compounds, flavors, or other functional ingredients within a protective carrier material to improve stability, enhance controlled release, and facilitate their incorporation into food products. This technology helps overcome challenges related to the sensitivity of certain ingredients to factors like oxygen, light, heat, or moisture, which can affect their efficacy or shelf life. Encapsulation ensures the targeted delivery of these active ingredients, allowing them to be released at specific stages during food processing, cooking, or digestion. The carrier materials, often in the form of micro or nano-sized particles, create a protective barrier around the encapsulated components, preventing interactions with external factors. This technique is widely used in the food industry to introduce new and innovative functional ingredients, such as probiotics, vitamins, flavors, and bioactive compounds, into a variety of food products, contributing to improved product quality, taste, and nutritional benefits.

The major global suppliers of Food Encapsulation of New Active Ingredients include FrieslandCampina, DSM, Ingredion, Kerry, Cargill, Lycored, Balchem, Firmenich, IFF, Symrise, Aveka Group, Advanced BioNutrition, TasteTech, Encapsys, Sphera Encapsulation, Clextal, Vitasquare, etc. The global players competition landscape in this report is divided into three tiers.
