Research Summary

Food-grade crystalline fructose is a sweetener derived from corn or sucrose that has been processed to form pure crystalline fructose. It is commonly used as a sweetening agent in food and beverage products due to its sweetness, clean taste, and high solubility. Crystalline fructose has a sweetness level approximately 1.5 times that of sucrose (table sugar) and is often used in combination with other sweeteners to enhance sweetness while reducing overall calorie content. It is produced by enzymatic hydrolysis of corn starch or sucrose, followed by purification and crystallization to obtain pure fructose crystals. Food-grade crystalline fructose is widely used in a variety of products such as soft drinks, fruit juices, dairy products, bakery items, and confectionery. It is favored for its ability to enhance flavor, improve texture, and provide sweetness without causing rapid blood sugar spikes, making it suitable for use in diabetic-friendly and low-glycemic index foods. Additionally, crystalline fructose is considered safe for consumption and is approved by regulatory agencies such as the U.S. Food and Drug Administration (FDA) and the European Food Safety Authority (EFSA) as a food additive.

The major global manufacturers of Food-grade Crystalline Fructose include ADM, IFF, Tate & Lyle, Galam, Tat Ni?asta, Xiwang, Hebei Huaxu, BLB, etc. The global players competition landscape in this report is divided into three tiers.
