### Research Summary

Food grade dicalcium phosphate (DCP) is a calcium phosphate compound that is commonly used as a food additive and nutritional supplement. It is composed of calcium cations ( $\text{Ca}^{2+}$ ) and phosphate anions ( $\text{PO}_4^{3-}$ ), with the chemical formula  $\text{CaHPO}_4$ . Food grade DCP is derived from sources such as phosphate rock or bones and is processed to meet strict purity and safety standards for human consumption. It is typically used in the food industry as a source of calcium and phosphorus, both of which are essential minerals for bone health, muscle function, and overall growth and development. Food grade DCP is often added to dairy products, baked goods, cereals, beverages, and nutritional supplements to fortify them with calcium and phosphorus. It is important to note that food additives such as DCP must comply with regulatory guidelines set by food safety authorities to ensure they are safe for consumption and do not exceed established maximum levels.
