Research Summary

Food-grade recycled polypropylene (PP) refers to a type of recycled plastic material that has been deemed safe for direct contact with food and is compliant with food safety regulations. Polypropylene is a thermoplastic polymer commonly used in food packaging, containers, and other applications. Food-grade recycled PP is produced by recycling post-consumer or post-industrial PP materials, diverting waste from landfills and reducing the environmental impact. The recycling process involves cleaning, sterilizing, and processing the plastic to meet the necessary quality and safety standards for food contact. This recycled material is then used to manufacture food containers, packaging, and utensils, contributing to sustainable practices in the food packaging industry while ensuring the safety of food products.
