### Research Summary

A food leavening agent is a substance added to dough or batter to introduce gas and create a rise, resulting in a lighter and more porous texture in baked goods. The leavening process typically involves the release of gases, such as carbon dioxide, which causes the dough or batter to expand. Common leavening agents include yeast, baking powder, and baking soda. Yeast ferments sugars to produce carbon dioxide, while baking powder and baking soda release carbon dioxide when they react with acidic or alkaline ingredients, respectively. The expansion of gases creates bubbles, causing the dough or batter to rise, resulting in products like bread, cakes, and muffins with a desirable volume and texture. The choice of leavening agent can impact the flavor, texture, and overall quality of the final baked goods.

The major global manufacturers of Food Leavening Agent include Lesaffre, AB Mauri, Lallemand, ANGEL, FORISE YEAST, SUNKEEN, Vitality King, Kraft, Church & Dwight, Solvay, Natural Soda, Berun, Yuhua Chemical, Hailian Sanyi, Haohua Honghe, etc. The global players competition landscape in this report is divided into three tiers.
