Research Summary

Forchlorfenuron is a synthetic plant growth regulator that belongs to the family of phenylurea compounds. It is commonly used in agriculture to promote cell division and enhance the growth of various crops, particularly fruits like grapes and kiwi. Forchlorfenuron is known for its ability to stimulate the development of larger and more uniform fruit size, increase yields, and improve the quality of harvested produce. It achieves these effects by influencing processes related to cell enlargement and differentiation. Farmers and horticulturists often apply forchlorfenuron as a foliar spray during critical growth stages to optimize crop development. While it has been widely used in certain agricultural practices, the application of forchlorfenuron and other growth regulators is subject to regulatory guidelines and must be carefully managed to ensure its safe and effective use in crop production.

The major global manufacturers of Forchlorfenuron include AlzChem, Anyang Quanfeng Biological, Zhengzhou Zhuoyue, Yinhai Chemical, Zhongke Chemical, Cheng Ming, Yinhe Chemical, Xinglian, Runtong, Henan Door Chemical, etc. The global players
