Research Summary

Formaldehyde scavengers are chemical compounds or additives designed to react with and neutralize formaldehyde molecules in various products and materials, thereby reducing or eliminating formaldehyde emissions. These scavengers are commonly used in industries such as adhesives, resins, textiles, and wood products to mitigate the release of formaldehyde gas into the air. The scavenger molecules chemically bind with formaldehyde, forming stable compounds that do not readily volatilize, reducing the risk of human exposure. This is especially important in manufacturing processes where formaldehyde-based resins are utilized, as well as in consumer products like furniture, flooring, and textiles. Formaldehyde scavengers contribute to efforts to comply with regulations on indoor air quality and emission standards, promoting safer environments and minimizing the potential health risks associated with formaldehyde exposure.

The major global manufacturers of Formaldehyde Scavengers include Georgia-Pacific Chemicals, StarChem, CHIMAR, SYNTHRON, Emerald Performance Materials, TAG Chemicals, Huntsman, etc. The global players competition landscape in this report is
